EBIZ MARKET, LLC

TECHNOLOGY SERVICES & CYBERSECURITY · PROJECT CASE STUDY

OWNER	ROLE	LOCATION	STATUS
Kelly Guzman	**Sole Owner & Operator**	**Hayden, Idaho**	**Active**

Overview

eBiz Market, LLC is a technology services and cybersecurity firm I founded and operate as sole owner. Based in Hayden, Idaho, the company serves small businesses and households across the Pacific Northwest with tech support, cybersecurity assessments, network and cloud services, software training, and audio-visual work. eBiz Market is also the registered parent entity for Community Tech Aid, the company's AI-assisted platform operating as an assumed business name.

Services

· Technical troubleshooting and repair

· Network setup, configuration, and hardening

· Cybersecurity assessments and infrastructure compliance

· Cloud computing services and virtual PC deployment

· Software training and end-user enablement

· Audio-visual troubleshooting and installation

· Remote support and on-site service across the greater Coeur d'Alene region

· Published cybersecurity resources and educational content

Federal contracting registration

eBiz Market is registered for federal contracting opportunities. The company maintains an active SAM.gov registration and is positioned to bid on small-business set-aside work in IT services.

· **UEI:** `ZBWHT4UT7V13`

· **NAICS:** `541512` (Computer Systems Design Services)

- **SAM.gov:** Active registration
- **Idaho assumed business name:** Community Tech Aid (File #6595769)

Infrastructure and domains

eBiz Market operates on a multi-subdomain architecture, with functional segmentation built in at the DNS layer. The primary marketing and information site is `ebizmarket.net`. Payments route through a dedicated subdomain, `pay.ebizmarket.net`, separating the payment surface from the public site.

All domains route through Cloudflare in proxy mode for origin IP concealment, TLS termination, DDoS mitigation, WAF coverage, and unified certificate lifecycle management. DNS records include configured SPF, DKIM, and DMARC for email authentication on every sending domain.

Payment system

Customer payments are handled through the Pay Link system at `pay.ebizmarket.net`. Hosting payment functionality on a dedicated subdomain isolates the payment surface from the marketing site, shrinks the blast radius of any compromise affecting the main domain, and gives customers a clear, verifiable URL to trust before entering financial information. This separation is a deliberate architectural choice consistent with payment-handling best practice for small-business operators.

Security posture

I own the full security posture of eBiz Market's infrastructure:

- TLS configuration and certificate lifecycle management through Cloudflare
- SPF, DKIM, and DMARC records configured for every sending domain
- Subdomain segmentation between marketing, payments, and operational systems
- Cloudflare WAF and bot management on all edge traffic
- Access control and credential management for administrative interfaces
- Customer data handling discipline aligned with small-business payment processing standards

Operating model

Sole owner, sole operator. Every function of the business runs through me: client intake, scope and pricing, service delivery, infrastructure, security, payments, recordkeeping, marketing, and federal contracting compliance. The model demands competence across the full

operational stack and is itself a portfolio-relevant demonstration of integrated, independent capability.

Skills demonstrated

· Small-business operations across service delivery, billing, and compliance

· Federal contracting readiness (SAM.gov, UEI, NAICS classification)

· Multi-subdomain infrastructure with security-driven segmentation

· Payment processing on a dedicated, isolated subdomain

· Cloudflare proxy configuration including TLS, WAF, and DDoS mitigation

· Email authentication (SPF, DKIM, DMARC) across multiple domains

· Customer-facing technical support across hardware, software, networking, and A/V

· End-to-end ownership of a registered, federally-compliant small technology business
