PROFESSIONAL SUMMARY

SOC Analyst with 10 years of hands-on IT and field experience moving into security operations. Skilled in SIEM triage, alert investigation, incident response, and clear written communication, backed by the Google Cybersecurity Professional Certificate and active Security+ prep. 98% on-time delivery across federal and enterprise contracts.

TECHNICAL SKILLS

Security Operations: SIEM (Splunk, Microsoft Sentinel), IDS/IPS, alert triage, log analysis, incident response, threat detection, MITRE ATT&CK framework, vulnerability management, ticketing systems, and security documentation

Networking & Systems: TCP/IP, DNS, firewalls, VPN, Windows Server, Linux, Active Directory, endpoint security

GRC & Compliance: security frameworks (NIST CSF, PCI DSS), risk assessment, audit support, policy development

Tools: Wireshark, Nmap, Cloudflare, ticketing systems (Jira, ServiceNow)

Generative AI & AI Tooling: LLM application development, prompt engineering, Responsible AI, AI-assisted research & content creation, vibe coding (Google AI Professional Certificate, 2026)

WORK EXPERIENCE

Security Engineer & AI Platform Builder June 2025 to Current
Community Tech Aid | *Remote*

- Built and operate communitytechaid.ai end to end: an AI-powered consumer tech-support platform — a custom generative-AI (LLM) assistant built solo via vibe coding — created after seeing clients and community members repeatedly fall victim to social engineering, to educate and protect them.
- Architected and operate the platform's full security layer plus the prompt design and Responsible AI guardrails (output evaluation, abuse and jailbreak resistance) fronting its Anthropic-powered LLM assistant.
- Implemented Zero Trust across the platform, maintaining a zero-breach record since launch.
- Manage all domain names, DNS, and security operations through Cloudflare (WAF, DDoS protection, SSL/TLS, DMARC, SPF, and DKIM), verifying every DNS record across multiple domains.
- Authored and maintain the site blog, using AI-assisted research and content creation to translate social engineering, phishing, scams, and account security into clear communication for non-technical users.
- Operate the platform end to end, sustaining 98% uptime and resolving 100% of flagged vulnerabilities via security scans.
- Drove the project from concept to live production solo: design, build, content, security, and operations.

Owner and Field Technician July 2016 to June 2025
eBiz Market, LLC | *Remote and On-site*

- Executed federal device upgrade rollouts under compliance requirements (USPS handheld devices, Verizon Modification Team): scheduling, configuration, documentation, and verification across postal facilities in Washington and Idaho.
- Served as lead technician on enterprise deployments (USPS handheld swaps, Kohl's kiosk replacements) and completed solo enterprise contracts across 6+ national brands (ROSS Stores payment terminals, Barnes & Noble server batteries).
- Performed A/V installation, hardware deployment, and post-install troubleshooting across multi-vendor enterprise rollouts (ROSS Stores, Kohl's, Joann Stores).
- Supported residential and small-business clients through collaboration with referral partners on home computer security, user training, system upgrades, and A/V support, across both Windows and Mac platforms.
- Maintained a 98% deliverable rate as an approved buyer on Field Nation and WorkMarket; rating verifiable on request.

CERTIFICATIONS AND TRAINING

- Google Cybersecurity Professional Certificate, 2026
- CompTIA Security+ (SY0-701), in progress, exam 2026
- CompTIA Network+, accelerated training, 2025
- ISC2 Certified in Cybersecurity (CC), training completed, 2024
- Google AI Professional Certificate, 2026

COMMUNITY INVOLVEMENT

- Chief Polling Judge, Kootenai County, Idaho (2021 to 2024): managed the secure, compliant handling of sensitive election materials and polling operations.
