PROFESSIONAL STATEMENT

GRC & CYBERSECURITY CAREER FOCUS · COMMUNITY TECH AID

NAME
Kelly Guzman

FOCUS AREAS
Governance, Risk & Compliance · Audit Readiness · Security Operations

LOCATION
Hayden, Idaho

Statement

I am an IT professional with experience in federal operations, enterprise environments, and direct client support, bringing systematic troubleshooting skills, rigorous documentation practices, and clear technical communication to the field of cybersecurity. I am driven by a commitment to accountability and holding systems to the standards they claim to uphold, with a focused interest in governance, risk, and compliance. My field operations background, investigative persistence, and audit-ready documentation position me to support any organization's compliance and security goals.

Extended statement

I am an IT professional with hands-on experience across federal operations, enterprise retail environments, and direct client support, now pursuing a career in cybersecurity with a focus on governance, risk, and compliance. My strengths include systematic troubleshooting honed through years of field work, clear technical communication with non-technical audiences, and rigorous documentation practices that hold up under scrutiny. I am driven by a commitment to accountability and holding systems to the standards they claim to uphold. Through my work founding Community Tech Aid, I have built a platform where compliance, secure infrastructure, and clear risk communication are operational requirements, not afterthoughts. I bring the same persistence and attention to detail to GRC work: pulling the thread, following the evidence, and documenting everything. I am seeking opportunities where my federal field operations background, PCI-compliant deployment experience, and investigative instincts can support an organization's compliance and risk mission.

Strengths

- **Systematic troubleshooting and triage.** Years of field work across federal, enterprise, and direct client environments. I diagnose, I don't guess.
- **Technical communication with non-technical audiences.** Community Tech Aid exists because I can translate risk and process for people who do not speak the jargon.
- **Tenacity in documentation and accountability.** Forensic-level record keeping and procedural persistence demonstrated across complex multi-agency engagements. That is a GRC asset.

Values

- **Integrity and accountability in systems.** I hold institutions to their own standards. That is the same instinct that drives good compliance and audit work.
- **Practical, repeatable controls.** Security that survives contact with real operations, real users, and real deadlines.

Career direction

- **Cybersecurity focus:** Governance, risk, and compliance, with supporting strength in security operations and incident documentation. I think in systems and feedback loops, and I want to be the one verifying the control, not assuming it works.
- **Target audience:** GRC and compliance recruiters, government contractors, and regulated organizations. I am building toward roles where my federal experience and field operations background are relevant, not decorative.
- **Value alignment:** Organizations need people who document relentlessly, communicate clearly under pressure, and do not flinch when the trail gets complicated. My background in federal field operations, PCI-compliant retail rollouts, and direct client triage means I have already been doing the unglamorous core of compliance work: verifying that systems meet the standards they claim.
